

IN THE SPECIFICATION

Page 11, lines 21-29, amend the existing paragraph as follows:

b1 A mobile station ~~14~~ 12 further includes a controller 84, formed of an ASIC (application specific integrated circuit), processing device, or combination thereof. The controller 84 includes functional elements which are operable pursuant to an embodiment of the present invention. Here, the controller is shown to include a determiner 86 and a power controller 88. The determiner is coupled to the receive portion of the mobile station 12 to receive indications of signals detected by the receive portion of the mobile station. And, the power controller 88 is coupled to the determiner to receive indications of the determiner to receive indications of determinations thereat.
